

Visit Schedule - Feature Documentation

Overview

The Visit Schedule feature allows Study Designers to create and manage study visits with form assignments, timing windows, and conditional logic.

1. Create/Edit Visit Schedule

Main Interface

- **Build Visit Schedule** button - Primary action to create the schedule
- **Add Visits** button - Add individual visits to the schedule

Flow

If schedule is already built & Visit Groups are available:

```
Show: Edit Schedule
- Visit Group Section
- Anchor Window
- Visit 1: Baseline (3 days)
- Visit 2: Baseline (5 days)
- [Add Visit] button
```

2. Add Visit Modal/Form

Visit Properties

Basic Information

- **Visit Name** - Text input for visit identifier
- **Start Day** - Number input (day of visit relative to study start)
- **Visit Window** - Number input ($\pm$ days allowed for visit completion)

Anchor Visit Configuration

- **Anchor Visit** - Dropdown to select reference visit
- **Offset from Anchor** - Number input ($\pm$ days from anchor visit)

Action Buttons

- **Save Visit** - Saves the visit configuration
 - **Assign Forms** - Opens form assignment interface
-

3. Assign Forms to Visit

Two-Column Layout

Left Column: Available Forms	Right Column: Assigned to this Visit
Lists all forms that exist in the study but are not assigned to this visit: • Form 1 • Form 2 • Form 3	Shows forms currently assigned to the visit: • Form 1 • Form 3 User can drag forms back to "Available Forms" to unassign them.

User can drag forms from this column to the "Assigned" column.

Form Settings Panel (Per Form)

When a form is assigned, configure:

- **Form Name** - Display name
- **Starts** - Day [number] of visit (relative to visit day)
- **Duration** - [number] Days/Weeks form is available
- **Required** - Yes/No toggle

4. Visit Properties (Conditional Logic)

Condition Builder

Configure when a visit should occur based on form field values:

Format:

```
Visit occurs only if:  
[Form 1].[Field 3] [Operator] [Value]  
AND/OR  
[Form X].[Field Y] [Operator] [Value]
```

Example:

```
Form 1, Field 3 > 100  
AND  
[Another condition] < 50
```

Operators Supported

Operator	Description
----------	-------------

>	Greater than
<	Less than
>=	Greater than or equal
<=	Less than or equal
==	Equal to
!=	Not equal to

Logic Operators

- **AND** - All conditions must be true
- **OR** - At least one condition must be true

Save Condition

Button to save the configured conditional logic for the visit.

| 5. Build Visit Schedule (Timeline View)

Visual Timeline Canvas

The schedule displays visits on a horizontal timeline where:

- X-axis represents study days
- Each visit appears as a card at its scheduled day
- Visits can be dragged and dropped to adjust timing

Visit Card Display

Each visit shows:

- Visit name

- Day number
- Cycle information (if repeating)

Repeating Visits (Cycles)

For visits that repeat:

```
Visit 1 (28 Days) → Visit 2
├ Cycle 1
└ Cycle 2
```

Displays as multiple cards on timeline at appropriate intervals.

Visit Groups (Available Visits Panel)

Shows a separate section for:

- Unscheduled visits
- Visits available to add to timeline

Branching Logic Indicator

Visual representation showing:

- Conditional paths (e.g., "If < 100" → Visit 2)
- Alternative paths (e.g., "If >= 100" → Visit 4)

Finalize Button

Once schedule is configured, click "Finalize" to lock the schedule.

6. Change Detection & Sign Changes

When Schedule is Modified After Finalization

Detected Changes:

Changes detected:

- Cycle length changed (28 → 11 days)

Impact:

- 4 Visits affected
- Forms removed

Sign Changes Button

After reviewing impact, user must sign off on changes to apply them.

Key Features Summary

1. Visit Configuration

- Name, day, and window settings
- Anchor-based scheduling
- Repeating/cycle support

2. Form Assignment

- Drag-and-drop interface
- Per-form timing settings
- Required/optional flags

3. Conditional Logic

- Field-based conditions
- Multiple condition support with AND/OR
- Cross-form references

4. Visual Timeline

- Drag-and-drop visit positioning
- Cycle visualization
- Branching path display

5. Change Management

- Detect post-finalization changes
- Impact analysis
- Approval workflow (Sign Changes)

| User Workflow

1. Create Study

2. Build Visit Schedule

3. Add Visits

- Configure visit properties
- Set timing/windows
- Add conditions (optional)

4. Assign Forms to Each Visit

- Drag forms to visit
- Configure form timing

5. Review Timeline

- Visualize schedule
- Adjust as needed

6. Finalize Schedule

7. If changes needed later:

- Modify schedule
- Review impact
- Sign changes

Technical Notes

Visit Groups

- Acts as organizational containers for visits
- "Anchor" visits serve as reference points

Anchor System

- Baseline visit typically serves as primary anchor
- Other visits can be offset from any anchor
- Offset specified in days (positive or negative)

Cycle Calculation

- System automatically generates cycle instances
- Based on repeat interval and end criteria
- Displays each cycle on timeline

Condition Evaluation

- Conditions evaluated when form data is submitted
- Visit becomes available only if conditions are met
- Supports complex multi-condition scenarios

Best Practices

1. **Define anchor visits first** - Establish baseline/key visits before dependent visits
2. **Use meaningful visit names** - Clear naming helps with scheduling
3. **Set appropriate windows** - Balance flexibility with protocol requirements
4. **Test conditional logic** - Verify branching paths work as expected
5. **Review before finalization** - Changes after finalization require sign-off
6. **Document rationale** - Note reasons for conditional visits and complex schedules

Future Enhancements (Potential)

- Visit templates for common patterns
- Bulk visit operations
- Schedule comparison/diff view
- Export to protocol documents
- Integration with site calendaring
- Patient-facing schedule view

Documentation based on handwritten specification dated 07/01/26
