

Sponsor-Side Role Definition & Responsibilities

This platform follows a **phase-based role activation model**, ensuring clear separation of duties, audit readiness, and real-world clinical alignment.

Study Start-Up Phase (Before Deployment)

(Study Design, Review, UAT, and Deployment Readiness)

Active Roles

- Project Manager (PM)
- Study Designer / Builder
- Build Reviewer
- UAT Members
- Admin (*cross-phase*)
- *Translation Manager – Out of scope for Phase 1; planned for Phase 2*

Project Manager (PM)

Role Type: Orchestration & Governance

Active In: Start-Up & Maintenance Phases

Core Responsibilities

- Oversee overall study progress and current phase status
- Transition studies across phases (Build → Review → UAT → Production)
- Assign Designers, Reviewers, and UAT members to the study
- Review and comment on study builds
- Ensure all required approvals are completed before deployment
- Deploy the study to production only after mandatory approvals → Can implement platform level validation checks like if build is finalized, UAT is approved, no review comments are open, only then it will be deployed to production.
- Initiate Change Requests when the study is live
- Monitor amendment history and version lifecycle
- Access audit trails under “Reports” section related to:
 - Study versions
 - User actions
 - Phase transitions
- Raise product support tickets to our dev team.

- Upload and manage study-level documents (patient guides, site guides, etc.)
 - *Phase 1: upload-only*
 - *Phase 2: system-generated documents*

Restrictions

- Cannot build or edit forms directly
- Cannot create or modify study templates
- Cannot add users globally
- Cannot manage sites directly
- Cannot bypass required approvals

Future (Phase 2) Enhancements

- Download Master Screen Review (MSR)
- Download finalized Build Specification documents
- View and track device shipments

Study Designer / Builder

Role Type: Study Configuration

Active In: Start-Up Phase (Read-only post-deployment)

Core Responsibilities

- Build study forms using drag-and-drop components
- Create forms from scratch or from approved templates
- Create and manage reusable templates
- Configure visit schedules and form mappings
- Configure logic (skip, show/hide, validation rules)
- Preview the study as a deployed mobile application
- Submit study builds for review
- View reviewer comments and respond inline
- Create new study versions when Change Requests are approved

Restrictions

- Cannot approve builds
- Cannot deploy studies
- Cannot access:
 - Users
 - Sites
 - Audit trails
 - Study-level reports
- Cannot modify live study versions directly

Build Reviewer

Role Type: Review & Feedback

Active In: Start-Up Phase and Change request Only

Core Responsibilities

- Review study builds during the review phase
- Comment on:
 - Screens
 - Questions
 - Logic
 - User experience
- Provide structured feedback to Designers
- Participate in review cycles before UAT

Restrictions

- Read-only access to the builder
- Cannot edit forms
- Cannot approve final builds
- Cannot deploy studies
- Cannot access UAT or production data

Note:

Final approval authority remains with the designated Lead Reviewer / PM, ensuring audit clarity.

UAT Members

Role Type: Validation & Testing

Active In: UAT only

Core Responsibilities

- Test the application as a real-world deployed app
- Download the app from Play Store / TestFlight
- Onboard dummy patients
- Validate:
 - Forms
 - Visits
 - Notifications
 - Alarms

- Data capture behavior
- Execute UAT test cases
- Create:
 - Issue logs
 - Test scripts
 - UAT reports
 - Validation evidence
- Verify fixes after changes are applied

Restrictions

- Cannot modify study configuration
- Cannot deploy studies
- Cannot access live production data
- All findings must be raised as issues or Change Requests

Study Maintenance Phase (After Deployment)

(Live Study Execution)

Active Roles

- Project Manager
- Site Manager
- Data Manager (*Phase 2*)
- Admin

Sites Manager

Role Type: Site Operations

Active In: Maintenance Phase

Core Responsibilities

- Grant access to site users (investigators, coordinators)
- Manage site onboarding and activation
- Respond to site queries
- Track and manage device shipments
- Monitor site-level compliance and engagement under the “Reports” section.
- Access site-level reports and dashboards under the “Reports” section.
- Upload and manage site-facing documents:
 - Patient guides
 - Site manuals
 - Training materials

Patient Data Access (Can be implemented in Phase 2)

- Default: Aggregated or blinded data
- Subject-level access:
 - Only if explicitly approved by sponsor
 - Configurable per study
- No access to study design or logic

Data Manager (Phase 2)

Role Type: Data Oversight

Active In: Maintenance Phase (Future)

Planned Responsibilities

- Monitor incoming study data
- Run data quality checks
- Review edit checks
- Manage data queries
- Export datasets
- Lock datasets at study milestones

Admin

Role Type: Account & System Governance

Active In: All Phases

Core Responsibilities

- Create and manage users
- Assign roles and permissions
- Manage sponsor account settings
- Control license allocation
- Access full system audit logs
- Manage compliance and security settings

Restrictions

- Cannot edit study content
- Cannot approve or deploy studies

System Validator (Internal / Automated Role) - Can be a member from our Dev team

(Not exposed to customers in Phase 1)

Responsibilities

- Validate study readiness before deployment
- Ensure all required approvals are complete
- Verify configuration completeness
- Flag missing or invalid configurations
- Generate deployment readiness status
- Support audit and validation narratives
